March 2024 Newsletter
National Nutrition Month
Making Healthy Eating Easier

Good nutrition is essential in keeping current and future generations of Americans healthy across the lifespan. Breastfeeding helps protect against childhood illnesses, including ear and respiratory infections, asthma, and sudden infant death syndrome (SIDS). People with healthy eating patterns live longer and are at lower risk for serious health problems such as heart disease, type 2 diabetes, and obesity. For people with chronic diseases, healthy eating can help manage these conditions and prevent complications.

CDC's Division of Nutrition, Physical Activity, and Obesity (DNPAO) works with national, state, and local partners to make healthy living easier for people to achieve. We educate the public about the benefits of good nutrition on their health. We focus on increasing breastfeeding support and promoting the availability of healthy, affordable foods where people live, learn, work, and play.
Poor Nutrition Is Making Our Nation Sick

Many Americans’ diets lack adequate sources of good nutrition.

- Fewer than 1 in 10 children and adults eat the recommended daily amount of vegetables.
- Only 4 in 10 children and fewer than 1 in 7 adults eat enough fruit.

Vitamin and mineral malnutrition impacts our health and economy.

- Low levels of vitamins and minerals can result in mental impairment and central nervous system defects in infants.
- Poor nutrition contributes to many costly diseases, including obesity, heart disease, and some cancers.

Mothers stop breastfeeding earlier than intended.

- About 80% of mothers start out breastfeeding, but more than 50% stop sooner than they planned.
- Low rates of breastfeeding add more than $2 billion a year to direct medical costs.

Help us keep America healthy and strong. Learn how at: https://www.cdc.gov/nccdphp/dnpao/index.html

Partnering For a Healthier America

DNPAO partners with national groups, states, and communities to advance the following priorities:

**Early Childcare and Education (ECE) Obesity Prevention**
We partner with states to: 1) make state-wide improvements in their ECE system by incorporating obesity prevention standards and practices; and 2) support a targeted group of ECE providers to make facility-wide improvements using a learning collaborative intervention. These activities help providers support breastfeeding, healthy eating, and physical activity for children in their facilities.

**High Obesity County Program**
We fund 15 land grant universities in states with county obesity rates greater than 40%. Residents of these communities tend to have less access to healthy foods. To address this, many of the recipients work with local cooperative extensions to help increase the availability of healthy, affordable foods in their communities.

**International Micronutrient Malnutrition Prevention and Control Program (IMMPaCt)**
We help improve vitamin and mineral malnutrition in the United States and globally, focusing on iron, vitamin A, iodine, folate, zinc, and vitamin D.

**Racial and Ethnic Approaches to Community Health (REACH)**
We fund and support local groups in developing culturally-tailored community programs to reduce chronic diseases and risk behaviors. One focus of the program is assuring good nutrition is attainable for all people.

**State Physical Activity and Nutrition (SPAN)**
We fund 16 state recipients to implement evidence-based strategies at state and local levels to improve nutrition and physical activity. Exploring and implementing strategies to increase access to healthy foods is a common strategy. Many recipients help hospitals improve maternity practices and community support for breastfeeding.

Groundwater Awareness Week March 10-16

Much of the water we use comes from the ground. Learn more about the importance of groundwater, the threats to its safety, and how to protect its sources during Groundwater Awareness Week.

Water is one of the world’s most precious resources. People use water every day for many activities, such as drinking, bathing, recreation, agriculture, cooling, manufacturing, and medical uses. Although water plays an essential role in everyday life, many people don’t realize that much of their water comes from the ground.

Groundwater is water found below the earth’s surface in spaces between rock and soil. Surface water is water that collects above the earth’s surface, such as streams, rivers, lakes, or oceans. Thirty percent of all the fresh water on Earth is groundwater, while the other 70% is surface water. Groundwater supplies water to wells and springs and is an important source of water for public water systems and private wells in the United States.

An estimated 145 million Americans get their tap water from a groundwater source.

GROUNDWATER CONTAMINATION

FOR MORE INFORMATION ABOUT GROUNDWATER PLEASE VISIT: HTTPS://WWW.CDC.GOV/HEALTHYWATER/DRINKING/GROUNDWATER-AWARENESS-WEEK.HTML
World Hearing Day is held on 3 March each year to raise awareness on how to prevent deafness and hearing loss and promote ear and hearing care across the world. Each year, WHO decides the theme and develops evidence-based advocacy materials such as brochures, flyers, posters, banners, infographics and presentations, among others. These materials are shared with partners in government and civil society around the world as well as WHO regional and country offices. At its headquarters in Geneva, WHO organizes an annual World Hearing Day event. In recent years, an increasing number of Member States and other partner agencies have joined World Hearing Day by hosting a range of activities and events in their countries. WHO invites all stakeholders to join this global initiative.

https://www.who.int/campaigns/world-hearing-day/2024

Water is one of the planet’s most precious resources. World Water Day is observed each year on March 22 to promote the responsible use of water and access to safe water for everyone.

Every day, people use water for drinking, agriculture, industry, recreation, hygiene, sanitation, and health care. Water resources are precious and finite. Warming temperatures and other natural and human-made stressors threaten to impact the quantity and quality of our water on a large scale. World Water Day highlights the essential role water plays in our lives and how we can better protect it.

Cheesy Chickpea and Broccoli Bake Recipe

Ingredients

1 large bunch (about 1 pound) fresh broccoli, rinsed and cut into medium pieces (include tender parts of stems and leaves) or a 1-pound bag frozen broccoli florets (thawed)
1 15½-ounce can chickpeas, drained and rinsed
1 tablespoon olive oil
Salt and black pepper to taste
1 cup shredded Gruyere, cheddar or vegan cheese
½ cup whole-wheat breadcrumbs

Directions

Before you begin: Wash your hands.

1. Preheat oven to 400°F.

2. If using fresh broccoli, lightly steam it first: Place raw broccoli pieces in a steamer basket inside a saucepan filled with 1 inch of water. Steam on medium heat for 5 minutes or until broccoli is just tender and bright green.
Or, steam fresh broccoli in the microwave: Place raw broccoli pieces in a large microwave-safe dish or bowl with ¼-inch water at bottom. Cover with a microwave-safe plate and microwave on high for 3 minutes or until just tender and bright green. Drain water.

3. Toss steamed broccoli and chickpeas with olive oil. Place in a 9-by-9-inch baking pan.

4. Add salt and black pepper to taste. Top evenly with grated cheese, then top evenly with breadcrumbs.
Bake 10 to 15 minutes, or until cheese is melted and breadcrumbs are lightly browned. Remove from oven and serve immediately.

The CT WiZ Public Portal allows individuals who were vaccinated in Connecticut to access their own immunization records, while parents and guardians can also access their child’s records. You have the option of getting a PDF copy of your full immunization record, or your COVID-19 vaccine record that contains your SMART Health card, which is a digital copy of your COVID-19 vaccine record that can be stored on your phone as a QR code. (Note: CT DPH does not issue replacement 'CDC COVID-19 Vaccination Cards' to the public.)

What to join the Litchfield County Opiate Task Force (LCOTF)?

EXECUTIVE COMMITTEE OF LCOTF
Torrington Area Health District recently hosted a screening of the documentary "Shot in The Arm" on vaccine hesitancy at The Warner Theatre's Nancy Marine Studio Theatre on February 7th, 2024.

Before anyone had heard of COVID-19, filmmaker Scott Hamilton Kennedy known for works like THE GARDEN and FOOD EVOLUTION began investigating the global measles epidemic, filming with top public health officials—including Anthony Fauci—as well as rare interviews with anti-vaccine activists—like Robert Kennedy, Jr.—who influenced many parents to reject vaccinations for their children.

Acting quickly, Kennedy shifted his directorial eye to this historic crisis. "Shot in The Arm" takes a balanced approach, examining vaccine hesitancy both historically and in the context of the current pandemic. It delves into how misinformation and disinformation contribute to this issue, questioning whether we can foster curiosity over cynicism and bridge the political gaps that impact public health.

The event featured a panel of local experts, including Robert Rubbo, Director of Health, Patricia Miglowiec, Public Health Nurse, Dr. Jessica Magda, Local Pediatrician, and Dr. Paul Scalise, Vice President of Medical Affairs at Charlotte Hungerford Hospital Hartford Health Care. Dale Jones from WZBG 97.3 moderated the discussion.
The TAHD Emergency Preparedness Coordinator and fellow Region 5 MRC Coordinators participated in a Region 2 MRC Exercise/Training Event hosted at Southern Connecticut State University in New Haven. During the event, MRC Unit Leaders and Coordinators engaged in conversations about various topics including medical countermeasure distribution (MCMs), Family Assistance Centers (FACs), Harm Reduction/Opioid Awareness, and Community Preparedness. Additionally, volunteers had the opportunity to participate in a tabletop exercise aimed at familiarizing them with their roles during MRC activation. The volunteers left the event with generous MRC goodies and satisfied bellies after enjoying a delicious lunch.
TAHD IN ACTION

The Emergency Preparedness Coordinator from TAHD paid a visit to the Bethlehem Senior Center with the aim of educating seniors on personal emergency preparedness. The session covered various topics such as assembling To-Go Kits, staying vigilant ahead of severe weather, maintaining up-to-date medical records, updating contact information, and registering for emergency alerts, among other essential notifications. Seniors were provided with CT Ready guidebooks, File of Life documents, pet preparedness flyers, and other necessary supplies to assist them in preparing their personal To-Go Kits.

The TAHD Emergency Preparedness Coordinator is hosting the first ever BLS CPR course! Seats are limited.

Our CareVan Clinics Offer the Following Services:

Address Various Urgent Needs (not limited to):
- Common cold/flu
- Stomach aches
- Ear aches/infections and foreign body removal
- Abscess incision and drainage
- Minor burns, lacerations, sprains and small fractures
- Rashes and insect bites
- Corneal abrasions
- Family planning

Medical Screenings:
- Blood pressure, blood sugar, urinalysis, urine pregnancy

Lab Tests:

Referrals and Follow-up Care:
- Social Services, Behavioral Health, Primary Care and Specialists

Immunizations:
- Tetanus (Tdap), Pneumonia, Shingles, Hepatitis B, Meningitis, Gardasil (HPV), Polio, MMR (Measles, Mumps, and Rubella), Flu (Seasonal)
- COVID-19 Pfizer Vaccine (Ages 12+)

WALK-INS WELCOME
- Open to all ages. Insurance accepted but not required.

CIGNA

NO INSURANCE? NO PROBLEM!
ADULT SEASONAL FLU VACCINE $30
*HIGH DOSE $70
*65 YEARS AND OLDER
BLS Course: $95.00
Recommended for healthcare professionals

When: March 14th, 2024 at 1:00PM

Payment due at time of class or entry will not be permitted

Class held at 350 Main Street
Torrington, CT 06790

Training includes:
- Identifying and responding to the signs of a cardiac arrest
- How to provide rescue breaths
- How to give high-quality CPR
- How to use an AED
- Practicing crisis management skills
- How to effectively work as a team during a cardiac arrest

Participants will receive a provider electronic card valid for two years upon successful completion of the course
